

CONGRESS HALL 2
6 October (Saturday)
10.00-17.30

International Conference
"EDUCATION IN THE STRUCTURE OF A SINGLE TREATMENT AND
REHABILITATION PROCESS"
(Congress Hall 2)

Introduction

Psychiatric aid is becoming of an increasingly complex nature. Simple control of psychopathological symptoms, mainly with the help of drug therapy cannot now be considered as fully satisfying the increased demands of psychiatric care consumers and the society. It is not only treatment of certain mental disorders in its classical sense that is demanded from psychiatry and psychiatrists, but also restoration of the individual's cognitive and emotional-volitional characteristics and abilities that were damaged or lost in the process of mental illness, his or her social adaptation and, if possible, full integration into society. Much attention is paid to the quality of life of people with mental disorders at all stages of the psychiatric aid they are provided with.

Psychosocial rehabilitation is one of the most dynamically developing areas of psychiatry. Most experts believe that rehabilitation principles should be applied at the stage of active treatment of a mental disorder. This is a single treatment and rehabilitation process for people suffering from mental disorders. The concept of a single treatment and rehabilitation process proceeds from the principles of interdisciplinary and intersectoral cooperation.

Goals and Objectives

Goal: To carry out a comprehensive analysis of education issues built on the concept of the unity of treatment and rehabilitation in mental health

Objectives:

- To analyze the concept of a single treatment and rehabilitation process in the field of mental health care.
- To discuss the content of professional education in the structure of a single treatment and rehabilitation process.
- To discuss the specifics of education for non-specialists in the structure of a single treatment and rehabilitation process.

Organized by:

Co-sponsored by:

Program
