The Role of Psychology in the Field of Mental Health of Children, Adolescents and Youth

The state of mental health of children and adolescents is a key indicator of the state's welfare, the nation's intellectual and moral level, the country's socio-economic situation in the future. Protection of child and adolescent mental health is particularly important at the present time, marked by the rapid pace of life, the huge information load, the global economic and political crisis. According to WHO, about 20% of children and adolescents in the world have mental disorders, about half of which start at the age of 14. In the structure of diseases and disabilities, the first place belongs to mental disorders. Depression occurs in almost every fifth teenager. Among drug users, young people account for 70%. The plenary session participants will discuss the issues affecting the mental health of children and adolescents, as well as preventive practices.
